

Because Monroe® is THE Suspension Specialist, we are constantly adapting our offer to always perform at least as good as OE products.

Renault changed the design of its Renault Espace IV front strut for safety reasons. Therefore Monroe® is modifying the conception of their Strut too.

The old Struts were having a small spring seat which was only supporting the first Spring's coil and not the second bigger one. If this second bigger coil would break, the sharp fracture would cut the tyre. (see drawing).

The new design of the Monroe® Strut has now a bigger spring seat as well, in order to support this second coil when the spring is compressed.
