- Deposit the rear wheels, then remove the clips (4 clip per side) (Fig. 1)
- Deposit the fixation of the shocks (Fig. 2)

Installing of the rear shocks

- Position the shocks and tighten the top screw to the required torque
- Place a jack lift axle under the rear axle, then lift the rear axle until a dimension o (H) of 160mm (Fig. 3)
- Tighten the lower screw of the shocks to the required torque.
- Go down the rear axle and take off the jack lift axle
- Reset the springs on the rear axle
- Take off the compressor of springs
- Reset the clips and the rear wheels
