

MATERIAL SPECIFICATION

Textar T0110

Main Vehicle Application

ROR (Meritor)

Main Brake Manufacturer/Type

S-Cam Drum Brakes

Friction Material Release

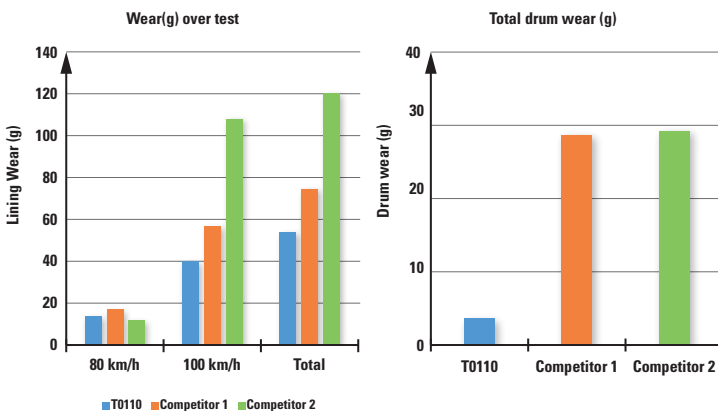

OE lining material

Features and benefits

Textar T0110 is a non asbestos, moulded material whose braking properties include a sustained tolerance to high operating temperatures. This formulation is extremely kind to drums, has excellent fade resistance and offers low noise performance.

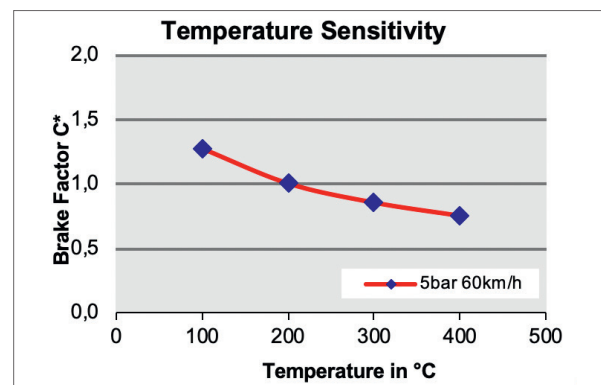

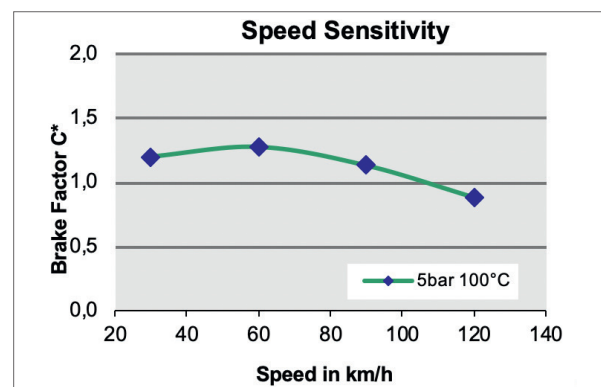

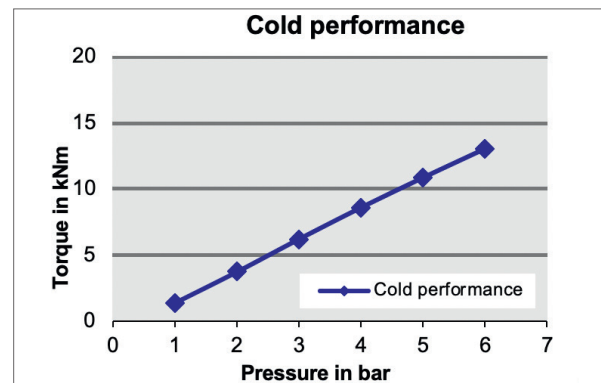

General Description

Textar T0110 is a premium material that was developed as an original equipment trailer brake material. **Textar T0110** has been developed with the central aim of providing the customer with excellent wear, drum life and excellent noise properties at a very good value. Designed for BPW, Meritor S-Cam Drum brakes, this OE trailer material provides a very stable and excellent braking performance in varying circumstances of speed, pressure and temperature. This material is extremely good for wear and this shows in our comparison to competitors in the same market segment. It is therefore a great value option to our customers worldwide.

Friction Performance/Output

(tested on BPW SN4218 S-cam brake, 420x180 mm linings)
