

MATERIAL SPECIFICATION

Textar T090

Main Vehicle Application

BPW	Knott
Fruehauf	Lohr
Kassbohrer	ROR (Meritor)
Traylor	SAE
York	SAF

Main Brake Manufacturer/Type

S-Cam Drum Brakes for trailers

Friction Material Release

OE lining material

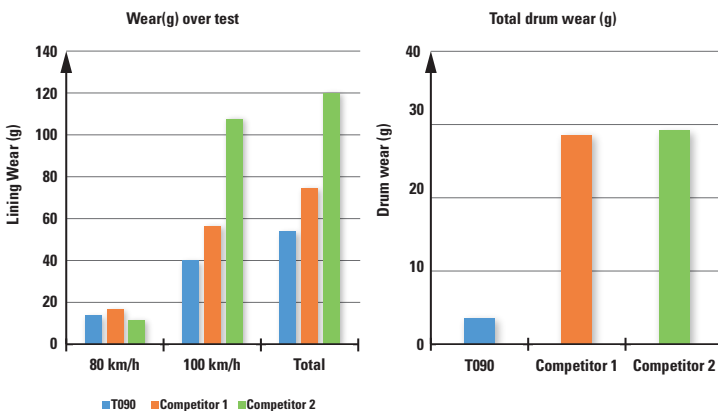

Features and benefits

Textar T090 is a non asbestos, moulded material whose braking properties include a sustained tolerance to high operating temperatures. This formulation is kind to drums, has excellent fade resistance and offers low noise performance.

General Description

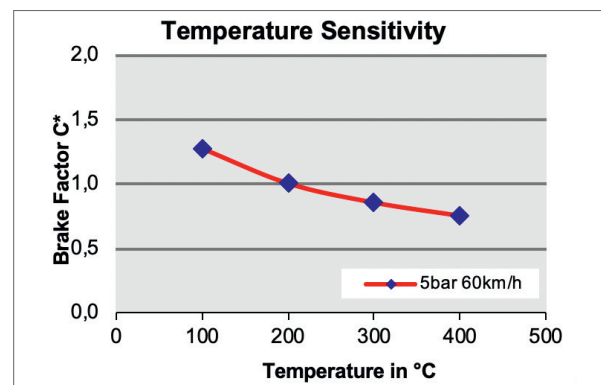

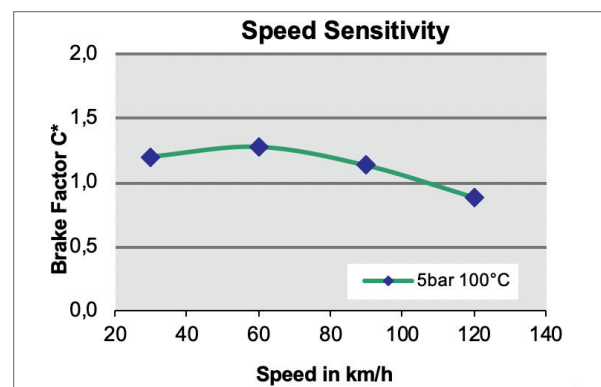

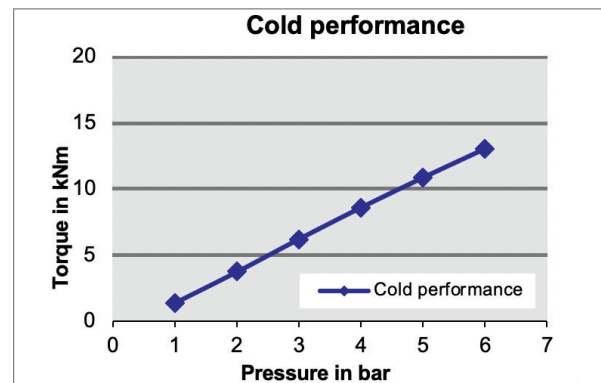

Textar T090 is one of Europe's most successful premium original equipment trailer brake materials.

Textar T090 has been developed to give optimum value for money through long wear life, kindness to drums and has good noise performance. Designed for BPW S-Cam foundation brakes, this OE trailer material provides exceptional brake performance across the entire speed, pressure and temperature ranges. With a high resistance to wear, superior brake drum compatibility and low noise characteristics it is no surprise that T090 is the choice for fleet operators and vehicle repairers worldwide.

Friction Performance/Output

(tested on BPW SN4218 S-cam brake, 420x180 mm linings)
