

Hengst air filter E1857L for DAF XF 106

Due to a patented installation protection of the OE manufacturer, Hengst Filtration has developed a solution which is intended to circumvent the patent and which differs slightly optically from the OE part.

Functionally, the new Hengst filter still corresponds to the OE filter. The optical deviations can be seen in the following illustrations.

OE filter

Hengst Filter E1857L

Sealing in housing

The OE filter has a flower-shaped sealing contour. The Hengst solution which is intended to circumvent the patent has an annular sealing contour on the end plate. An axial extension, which seals radially on the housing spigot, ensures the proper function of the filter.
