

febi 173159

To fit:

Vehicles with 9-32 Volt onboard voltage
2500 Lumen, IP 6K9K, ECE R10, R148, EMC, ADR,
Deutsch Connector

febi 177149 Connecting cable for Deutsch Connector, length 2m

febi 177150 Connecting cable for Deutsch Connector, length 5m

Bringing Light into Darkness

febi Worklights

If commercial vehicles or machines are operated in the dark, good visibility is extremely important. If stationary light sources are missing in the working area, the necessary illumination can only be ensured with additional work lights on the vehicle. Modern, efficient LED technology enables them to achieve good luminous efficacy with comparatively low power consumption.

The work light febi 173159 is equipped with a Deutsch connector that allows it to be easily and safely connected to the vehicle's electrical system with the matching counterpart. If no suitable Deutsch connector is fitted on the vehicle, it can simply be retrofitted with the matching connection cables febi 177149 and febi 177150. With the crimp connectors enclosed, the connection cable can be professionally connected to the wiring on the vehicle side. The shrink tubing, which is also included, reliably protects the connection point.

Deutsch connectors provide a secure electrical connection, are ideally suited for use in harsh working environments and are characterised by high resistance to environmental influences.

When installing worklights, please observe the applicable statutory regulations and the guidelines of the vehicle manufacturer.
