## Everything under control with switch units from febi

Electronic components are part of the standard equipment of all modern vehicles. However, the more electronic assemblies are installed, the more susceptible the vehicle becomes to possible malfunctions and defects. Poor plug connections, corroded contacts or broken cables are common triggers for often time-consuming troubleshooting.

The electrical components in the vehicle door, e.g. window lifter, door lock, mirror adjustment and also the mirror heating, are controlled centrally by a switch unit. One reason for failure of this switch unit is wear and tear due to an advanced service life. However, an open window during rain is also often the cause of premature failure because the rainwater drips onto the switch unit and can destroy the electronics.

febi offers not only these, but many other switch units and a wide range of replacement parts for vehicle electrics.

The complete range of brake parts can be found at: [partsfinder.bilsteingroup.com](http://partsfinder.bilsteingroup.com)
