

AUTOMATIC TRANSMISSION OIL

OILS & CHEMICALS | 29001

Purpose

The main purpose of automatic transmission oil is the lubrication of the mechanical components in the transmission. As with engine oil, transmission oil loses its lubricating properties over time, which leads to an increased wear of the components. We therefore recommend changing the automatic transmission oil, even when it is not required by the manufacturer.

Tasks

- · Lubrication of the components
- · Wear protection
- Fuel economy
- Cleaning
- Cooling
- · Protection against corrosion
- · Increased shifting comfort
- · Sound insulation

SYMPTOMS

- · Engine check-light turns on
- · Transmission jerks by switching
- · Switching times are not correct
- · Loud transmission

REASONS FOR FAILURE

- · Too much/too little oil
- Wrong oil
- · Change interval has been exceeded

CONSEQUENTIAL DAMAGES

- · Defective lubrication
- · Increase of pressure
- Greater wear of the components
- · Decreased lubrication effect
- · Dirty oil channels
- Serious mechanical damage
- Transmission damage

RECOMMENDED BY THE EXPERTS

- Have the oil level regularly checked
- Use oil specification stipulated by the manufacturer
- Promptly execute change intervals, particularly for older vehicles
- Often change the automatic transmission oil during durable trailer operations
- Renew the oil, the hydraulic filter and the seal rings, including the oil drain plug, every oil change

AUTOMATIC TRANSMISSION OIL BY VAICO

You can find more information at www.autoteile.de

- Increased lubrication reliability: targeted additive, optimal lubrication
- Quality: the VAICO quality brand offers products according to the original approvals
- Transport safe: 1 and 5 litre canisters with leak-proof induction seal
