

## PASSENGER COMPARTMENT FAN REGULATORS

COOLING | 25202

### Function

Passenger compartment fan regulators are installed near the blower and act as a series resistor for the blower motor. They regulate the current or voltage either via several internal resistors or via a built-in electronic system. This regulates the speed of the fan motor.

If this function is not given, the passing of the next general inspection is impossible.

The blower controller must function perfectly in at least three different speed levels.

### SYMPTOMS
