

NEW PRODUCT HIGHLIGHT | JAN2022

Blue Print ADBP970012

To fit:

Nissan NV300 (X82), Primastar (X83)

Vauxhall, Opel Vivaro A (X83), Vivaro B (X82)

Renault Trafic

Normal roof only

EN

Weather Strip, Rear Door

Function

The weather strip is fitted to the rear door aperture and is designed to form a seal between the body and the door of the vehicle. The profile of the seal is intended to provide a barrier to keep water and road debris out of the load area of the van and reduce road noise. The weather strip is manufactured with EPDM (ethylene propylene diene monomer) rubber, with a shaped metal infill to allow it to attach to the aperture. A rubberised foam seal is used to fill the void between the door and the aperture.

Failure

The constant opening and closing of the rear doors in all weather conditions means the weather strip can deform and potentially, over time, fail. Additionally, there is a risk of tearing the seal when removing tools or parcels from the van.
